Professional Summary

An enthusiastic Information Technology undergraduate passionate about Software Engineering, Cloud Computing, and DevOps. With a strong interest in automation, scalable systems, and cloud-native technologies, I enjoy building practical solutions to real-world challenges. Driven by curiosity and continuous learning, I strive to develop reliable and impactful technology solutions.

Education

University of Moratuwa <i>BSc (Hons) in Information Technology – CGPA: 3.4 / 4.0 (Up to L2S1)</i> • Key Coursework: Software Engineering, Cloud Computing, Distributed Systems, Data Structures, Database Systems	2024 – Present
H/North Kanumaldeniya National School <i>G.C.E. Advanced Level – Z-Score: 1.7991 (Combined Mathematics, Physics, ICT)</i>	2008 – 2022

Technical Skills

Languages: C#, Python, TypeScript, JavaScript, Bash, C/C++
Cloud & DevOps: AWS, Docker, Kubernetes (K3s), OpenTelemetry, Terraform, Jenkins, Linux, Nginx, CI/CD, Git, GitHub
Backend Development: Node.js, Express.js, FastAPI, RESTful APIs, WebSockets
Frontend Development: React, React 18, Vite, Tailwind CSS, HTML5, CSS3
Databases & Storage: PostgreSQL, MySQL, MongoDB, SQLite

Featured Projects

Tunnix – Self-Hosted Developer Tunneling & Ingress Platform Technologies: Go (Golang), WebSockets, TypeScript, Bun, Hono, React 18, Vite, Docker, AWS (EC2, CloudFront, Amplify, S3), Nginx, SQLite (WAL)	🐙 Code 📺 Live Demo 2026
- Developed a production-grade developer tunneling platform as an open-source alternative to Ngrok, securely exposing local HTTP services to the public internet via bi-directional WebSocket frame multiplexing. - Engineered a high-throughput Go ingress gateway and cross-platform CLI agent (tunnix) for low-latency request/response streaming and local port forwarding. - Architected a Bun/Hono control plane with SQLite in WAL mode, a 4-tier token security model, and a real-time React 18 dashboard for live tunnel telemetry and custom subdomain management. - Automated production deployment and edge routing leveraging AWS EC2, CloudFront, Amplify, S3, Nginx reverse proxying, and automated Let's Encrypt SSL certificates.	
CloudSight – Cloud Observability Platform Technologies: Node.js, Express.js, React, Python, Docker, AWS (Amplify, EC2, RDS, ECR), PostgreSQL, Redis, Nginx, CI/CD	🐙 Code 📺 Live Demo 2025 – 2026
- Built a collaborative cloud observability platform for proactive monitoring and incident management of AWS-hosted services. - Implemented automated anomaly identification algorithms, severity classification, and threshold-based incident tracking workflows. - Designed scalable PostgreSQL database schemas for high-volume telemetry ingestion, anomaly detection records, and operational analytics. - Architected an automated CI/CD and deployment pipeline using GitHub Actions, Amazon ECR, and Docker Compose on EC2 behind an Nginx reverse proxy, with AWS Amplify frontend hosting and private-VPC Amazon RDS.	

Featured Projects (Continued)

AWS K3s OpenTelemetry Observability Lab
Technologies: AWS EC2, K3s, Kubernetes, OpenTelemetry Collector, Honeycomb, Docker, Linux

 [Code](#) | 2025

- Provisioned an end-to-end cloud observability stack on AWS utilizing lightweight Kubernetes (K3s) and OpenTelemetry collector agents.
- Implemented distributed telemetry pipelines to ingest logs, metrics, and traces from containerized microservices.
- Configured telemetry export pipelines to Honeycomb dashboards for system visualization, latency bottleneck tracing, and Site Reliability Engineering (SRE) practices.

WarehousePOS – Desktop Point of Sale & Warehouse Management System
Technologies: C#, .NET 10, WPF, MVVM, EF Core, SQLite, Dependency Injection, Moq, xUnit, Serilog

 [Code](#) | Jan 2026 – Present

- Designed a modular monolith desktop application with strict Clean Architecture separation across Domain, Application, Infrastructure, and UI layers.
- Implemented robust transactional state machines for purchase orders and sales checkout, guaranteeing ACID compliance and zero unrecorded inventory adjustments.
- Established a high code-quality standard with zero-warning compilation (`TreatWarningsAsErrors`), automated unit/integration tests with xUnit & Moq, and single-file self-contained deployment.
- Managed schema evolution and data persistence using EF Core with SQLite, configuring comprehensive audit logs and daily disaster-recovery database backups.

Certifications

CCNA (Cisco Certified Network Associate): Networking, IP Addressing, Routing Protocols & Security (Reading / In Progress)

Supervised Machine Learning: Regression and Classification: DeepLearning.AI & Stanford Online

LFS101: Introduction to Linux: The Linux Foundation

Introduction to Python & NumPy: Foundations in Data Structures & Scientific Computing

Leadership & Extracurricular Activities

Batch Representative – Batch '23 <i>Faculty of Information Technology, University of Moratuwa</i>	2026 – Present
Programme Committee Member – Riseup Mora 2026 <i>University of Moratuwa</i>	2026
Senior Prefect <i>H/North Kanumuldeniya National School</i>	2019 – 2020
